New Tools, datasets and model improvements

Supporting the implementation of prototype impact-based forecasting approaches

Strong network of science partnerships, strengthening research capacity and operational capability

Supporting the WMO 'Early Warnings for All' and 'World Weather Research Programme'

WCSSP Southeast Asia is part of the Weather and Climate Science for Service Partnership Programme which comprises projects to develop partnerships harnessing UK scientific expertise. The projects – supported by the UK Government's International Science Partnerships Fund – aim to build the basis for strengthening the resilience of vulnerable communities to weather and climate variability.
